

Dear Sirs,

We are a rapidly growing Security Integration Company based in the Worcestershire area of the UK. We serve a nationwide client base from outlets in the Gloucester and Staffordshire areas.

Our services are offered on an unbiased platform to both Commercial and Domestic Customers.

Who are we?

Integrated Automation Limited can promote over 10 years industry experience. We are BS7858 Security Screened and Certified by the International Professional Security Association. We also have IOSH and CSCS Accredited Staff to allow our operations to comply with ever changing Health and Safety Legislation.

Our expertise lies within the domains of Car Park Management and Revenue Collection Systems alongside Automated Solutions, Conventional Access Control and Integrated TCP/IP Systems.

- **Automated Gates**
- **Barrier Systems**
- **Traffic Management Systems**
- **Turnstile Systems**
- **CCTV**
- **Access Control**

- **Revenue Collection Systems**
- **Ticketing Solutions**
- **Systems Integration**
- **VMS Signage and Signalling**
- **Induction Loop Signalling**
- **Equine Security**
- **Nursery School Security**

What can we provide?

If you are unsure about which system or solution to install, our Consultancy Service can offer unrestricted and balanced advice on which Solution or Integration to use. We can offer advice either by way of a simple email, telephone call or site visit.

Our Installation Service, with combined support from the Project Management Team, can offer unrivalled expertise in delivering your solution. With site disruption and financial loss the key factors during installations, our team will minimise the risk and provide temporary or redundant systems during your installation to ensure your Security is kept to a maximum and losses are kept to a minimum.

Project Management is key to any successful installation and we offer a full PM facility as a standard with each Installation.

Support, obviously after sales support is the backbone to any installation business. As we know there can be any range of after sales requirements, due to Vandalism, Crash Damage, Maintenance requirements and occasionally a system breakdown. We understand the need to minimise downtime and increase uptime.

We prefer to get over our obstacles, not find a way around them

We can offer various Maintenance packages to support your new or existing systems over a variable time period. This will include pre-determined maintenance visits and discounted rates for callouts and parts, dependant on the Contract selected.

Sub Contract works, Integrated Automation Limited are able to offer Sub Contract services to Principle Installers or Contractors. You may be a biased CCTV Company in need of a Car Park Barrier System or maybe you have a client who has needs which you may have to refer to a Solutions Provider, if so we would be more than pleased to assist you!

What can we do?

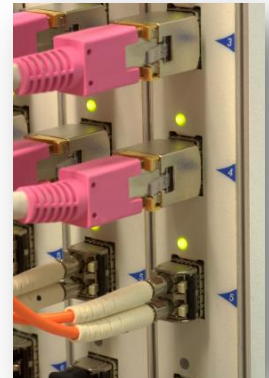

Product Specification, because we are independent we can offer a vast range of Products as we are not tied to production or partnership agreements. This allows us to be more competitive on price and variety while maintaining reliability and quality.

Bespoke Products, we have highly skilled craftsmen at our disposal. If you have a special Vehicle, Pedestrian Gate or Perimeter Fencing requirement we can provide a tailor made design and build service.

Broadband is an evolving abyss and DSL has opened up a new edge to the remote connectivity aspect of Security. We have seen so many CCTV applications hooked into the World Wide Web, now comes the turn of the conventional Car Park System which we can now control over a TCP/IP network connected to a secure DSL Router. We can offer pre-configured routers or onsite commissioning of such systems with the provision of Firewalls and Port Forwarding.

We are able to design and install our own cable infrastructure for TCP/IP solutions in addition to RS485/233 requirements.

Hardwired functionality is always best placed, however there is always a need for wireless communications. We can offer the hardware and software skills to enable a 'building to building' or for example a remote car park to nearby building wireless network link.

Many Car Park Systems are in existence and from time to time are in the need of replacement, there may be a need for new civil/building works and ducting. Integrated Automation has a dedicated team of ground workers who can undertake replacement, extension or new civil work in association with our Project Management team.
